

For Investors in the United Kingdom. Investors should read the Prospectus prior to investing.

The Fund seeks to track the return of the gold spot price

Between 5 January 2015 and 8 April 2015, the Fund's 12 month performance figure was incorrectly stated for the period 31 December 2013 to 31 December 2014. The Fund's webpage and Factsheet showed a performance figure of 0.12% when it should have shown - 0.44%. If you believe this error may have affected you, please do not hesitate to contact us.

Source: BlackRock. Fund performance data is displayed on a Net Asset Value basis, in Base Currency terms (as shown in Key Facts), with net income reinvested, net of fees. Brokerage or transaction fees will apply.

Performance data is based on the net asset value (NAV) of the ETC which may not be the same as the market price of the ETC. Individual shareholders may realise returns that are different to the NAV performance.

Important Information: The value of your investment will vary and your initial investment amount cannot be guaranteed. ETCs trade on exchanges like securities and are bought and sold at market prices which may be different to the net asset values of the ETCs. The securities issued by iShares Physical Metals plc are limited recourse obligations which are payable solely out of the underlying secured property.

Important Information Continued: If the secured property is insufficient any outstanding claims will remain unpaid. ETCs will seek exposure to a limited number of market sectors. Compared to investments which spread investment risk more generally through a variety of sectors, price movements may have a greater effect on the overall value of the investment. Precious metal prices are generally more volatile than most other asset classes, making investments riskier and more complex than other investments.

GLOSSARY

Total Expense Ratio (TER): A measure of the total costs associated with managing and operating a fund. The TER consists primarily of the management fee plus other expenses such as trustee, custody, or operating expenses. It is expressed as a percentage of the fund's total net asset value.

Distribution yield: The distribution yield represents the ratio of distributed income over the last 12 months to the fund's current Net Asset Value.

Product Structure: Indicates whether the fund buys the actual underlying securities in the index (i.e. Physical) or whether the fund gains exposure to those securities by buying derivatives, such as swaps (known as 'Synthetic'). Swaps are a form of contract that promises to provide the return of the security to the fund, but the fund does not hold the actual security. This can introduce a risk that the counterparty defaults on the "promise" or contract.

Methodology: The metal backing the securities are always physically held.

Daily Metal Entitlement per Security: The amount of physical metal represented by one security.

Total Metal (tonnes): One metric tonne is equivalent to 1,000 kilograms or 32,150.7465 troy ounces.
